Explanation of the tags:

: is used as a container to group content like gallery and cards.

<img>: tag is used to display syllabus images using the src attribute.

CSS classes like .gallery, .card, .title, .faculty, and .break are introduced for styling.

display : grid is used to create a two-column gallery layout.

margin : auto centers the content on the page. border-radius is used to give rounded corners to cards and images. border-collapse : collapse makes the table borders neat.

font-family changes the text style of the whole page.

Combined selector td, th applies common styles. HTML comments <!-- -->are used to organize the code into sections.

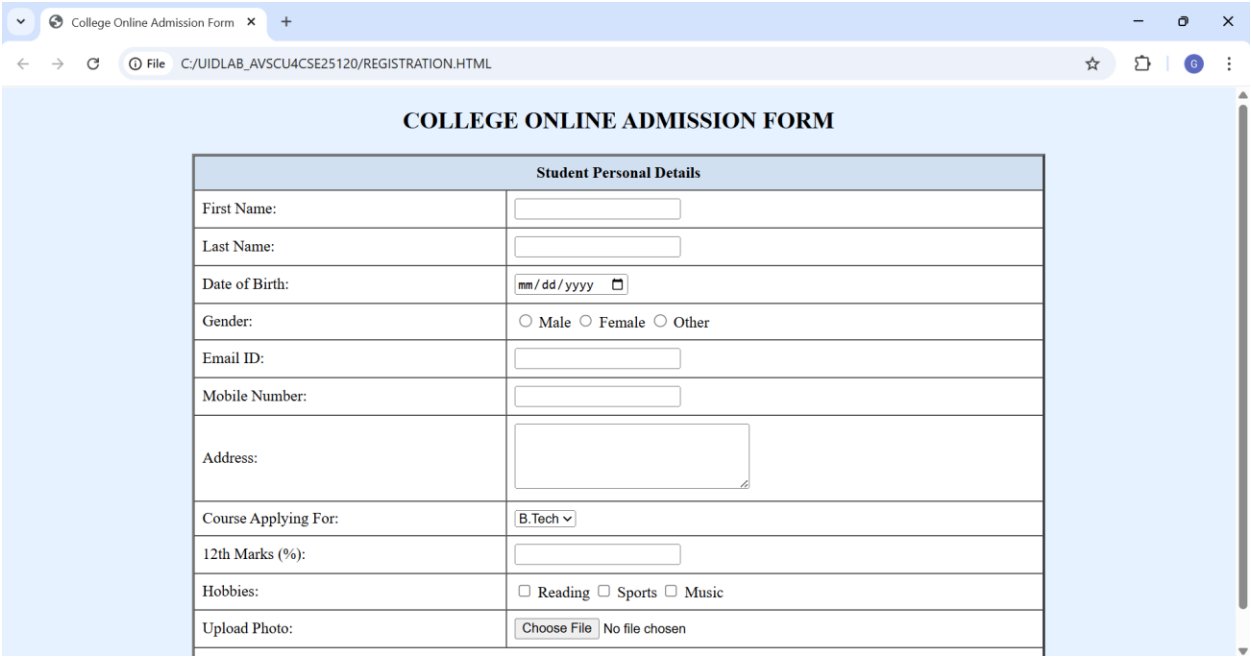
Output:



Explanation of the tags:

<form>– Collects user input

colspan – Merges two columns into one

<label for>. – Labels input fields. – Takes user input (text, date, radio, email, tel, number, file, reset).

<textarea>– Multi-line text input. & –

<select>&<option> Dropdown list. checkbox – Multiple selections. – Shows alert message. Attributes: id, name, align, bgcolor, rows, cols, border, width – control layout and identification.

2 . AIM: A Company wants to design a webpage that display two different forms side by side using iframes in which one should display a login form and other should display register form

Program :

```
<!DOCTYPE html>
<html>
<head>
<title>Login Form</title>
</head>
<body bgcolor="#e6f2ff">
<h2 align="center">Login Form</h2>
<form align="center">

</tr>
</table>
</form>
</body>
</html>

```
<iframe src="login.html" width="90%" height="400"></iframe>

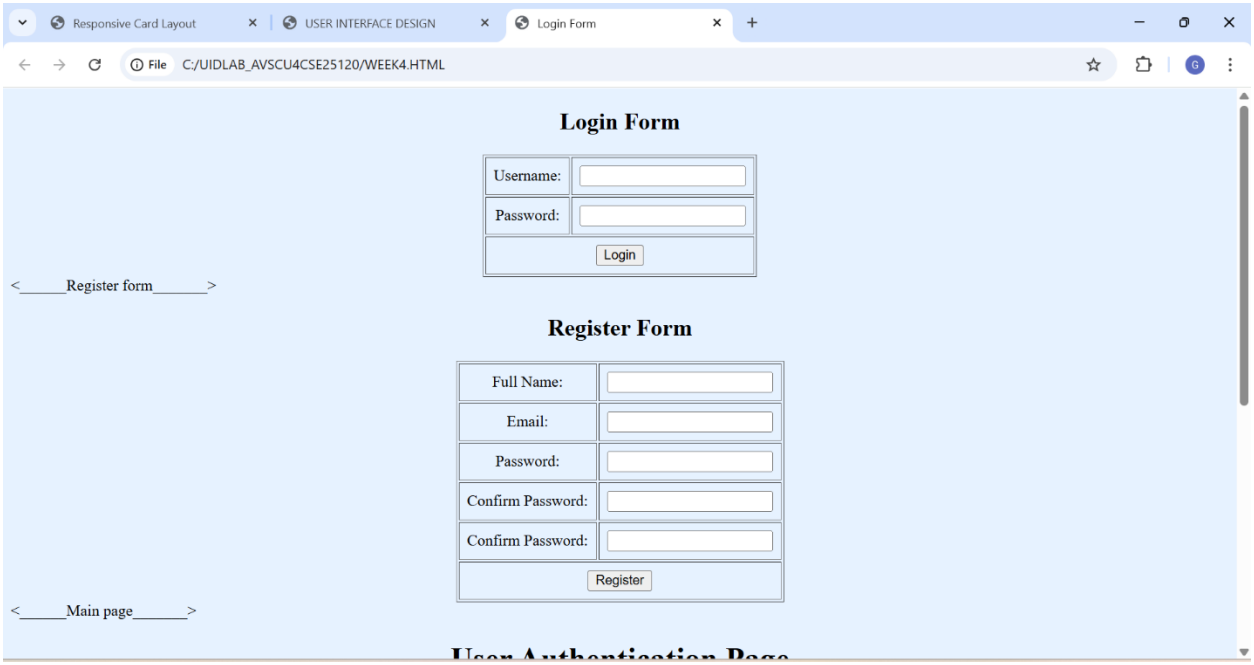
<td width="50%" align="center">
<iframe src="register.html" width="90%" height="400"></iframe>
</td>
</tr>
</table>
</body>
</html>
```

Top of Form

OUTPUT:



Explanation of the tags: (Inline Frame): Displays another HTML page inside the current page. Two separate pages are created: Login Form and Register Form. A main page uses two iframes to show both forms side by side. src attribute: Specifies which page to load inside the iframe. width & height: Set the iframe size. A table with two columns is used to align the iframes in one row. Each iframe loads a different form page (login / register).

Week-5

1 . Aim : To create a responsive card layout using HTML and CSS with three cards, each containing an image, title, and button.

Procedure:

```
<!DOCTYPE html>
<html>
<head>
  <title>Card Layout with Images</title>

  <style>
    body{
      font-family: Arial, sans-serif;
      background-color: #f2f2f2;
    }

    .container{
      display: flex;
      justify-content: center;
      gap: 20px;
      margin-top: 50px;
    }

    .card{
      background-color: white;
      width: 260px;
      border-radius: 10px;
      box-shadow: 0 4px 8px rgba(0,0,0,0.2);
```

```
    overflow: hidden;
    text-align: center;
}

.card img{
    width: 100%;
    height: 180px;
    object-fit: cover;
}

.card h3{
    margin: 15px 0 10px 0;
}

.card p{
    font-size: 14px;
    padding: 0 15px;
    color: gray;
}

.card button{
    margin: 15px 0 20px 0;
    padding: 8px 15px;
    border: none;
    background-color: #007bff;
    color: white;
    border-radius: 5px;
    cursor: pointer;
}
```

```
        .card button:hover{
            background-color: #0056b3;
        }
    </style>
</head>

<body>

    <div class="container">

        <div class="card">
            <img src="https://picsum.photos/300/200?1" alt="Image 1">
            <h3>Card 1</h3>
            <p>This is the first card description.</p>
            <button>Read More</button>
        </div>

        <div class="card">
            <img src="https://picsum.photos/300/200?2" alt="Image 2">
            <h3>Card 2</h3>
            <p>This is the second card description.</p>
            <button>Read More</button>
        </div>

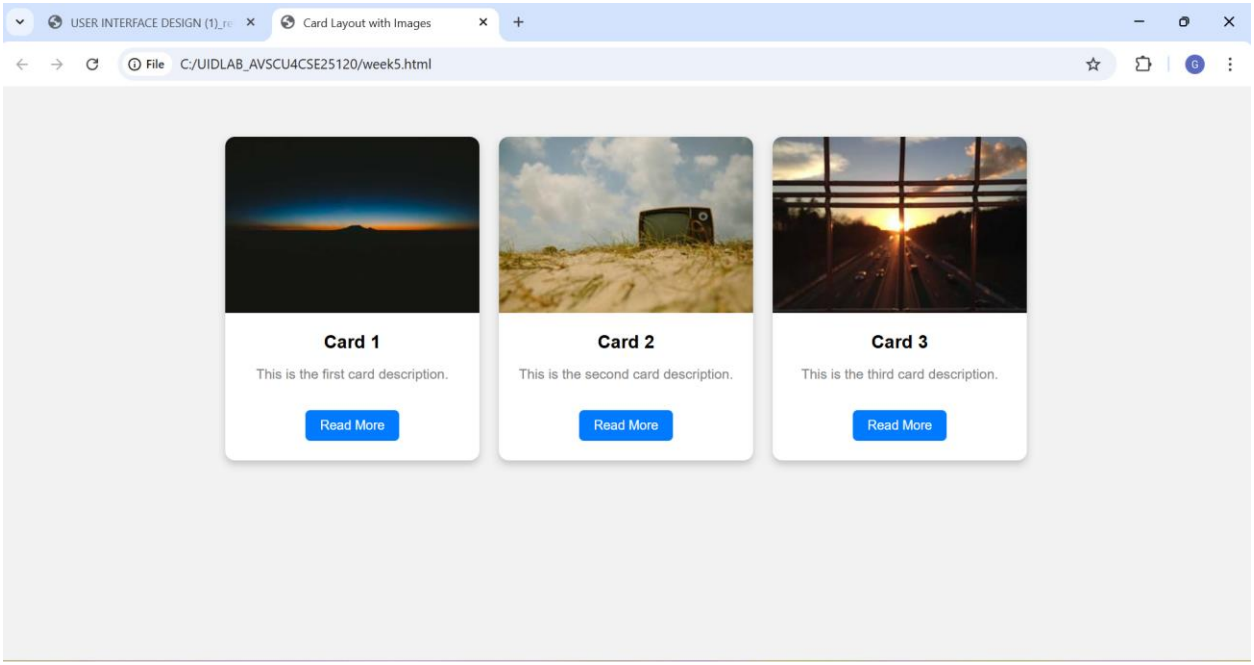
        <div class="card">
            <img src="https://picsum.photos/300/200?3" alt="Image 3">
            <h3>Card 3</h3>
            <p>This is the third card description.</p>
```

```
            <button>Read More</button>
        </div>

    </div>

</body>
</html>
```

OUTPUT:



Explanation of the tags:

- flex → Align items in row
- box-shadow → Adds shadow
- border-radius → Rounded corners
- object-fit: cover → Adjust image without distortion
- :hover → Changes style when mouse is over element
- overflow: hidden → Hides extra content outside border

2.Aim: To design a mini website using iframe navigation links (Home, About, Contact), where clicking on each link displays the respective content within the same page using internal or external CSS.

Procedure:

```
<!DOCTYPE html>

</body>
</html>
```
